Understand Client Language

Different departments have their own domain knowledge, designer should learn their language, and utilize it to communicate in reports.

Ask Question when Doubt

It's a big mistake to put a question on hold, the longer it stays, the deeper misunderstanding, it should keep the conversation open and clear to internal and external parties.

Manage Client Expectation

From the project beginning; it should keep the design plan well structured, from setting the scope, communicate, review, sign off to record.

Provide Feedback to Give Sense of Security

For those who never involved in design work, reveal some of the project statuses, conclusions, even invite them to accompany an interview is a very good source of feedback.

03. AsiaYo.com - Strengthen Engagement

As a Design team lead, build up a design discipline in the organization from scratch.

Background :

Most of the accommodation on Asia.com was not famous even some of there is B&B run by the landlord.

Pain point :

The user is not familiar with the context and can't tell the property's selling point. And they couldn't understand the relevance of the limited information.

List page :

Effect :

1. The user spending too much time on the listing page leads to a low conversion rate.
2. The jump rate is high when the search result amount is low.

Limitation :

1. Recruit well-known property is hard and slow.
2. Cutting price is not a long-term solution.
3. Property landlord's willingness is low for the cooperate campaign since the order from AsiaYo is also low.
